ME ON HOLD!

USES : Detect electro magnetic fields (EMF) and extremely low frequency (ELO) from power lines, electrical equipment, and ghosts.

FEATURES : Designed to provide a quick, reliable way to measure magnetic field radiation levels around power lines, home appliances and industrial devices. Measures electro-magnetic field radiation (EMF) at extremely low frequency (ELF) from 30Hz to 2000Hz. Used for diagnosis of problems with electrical wiring, power lines, and electrical shielding effectiveness, but ghost hunters swear by the inclusion of an EMF meter in their toolkits.
